

# INSTALLATION INSTRUCTIONS

## SH-ADP1.5 1.5 GPM SHOWER ADAPTER

The SH-ADP1.5 uses Bernoulli's theorem and the law of conservation of energy. The mixing of water and air gives us the ability to reduce the water flow down to 1.5 gpm and yet have the same water flow out of the shower head as a regular shower head.

1. *Remove any flow restrictors that may already be in the shower head.*
2. Insert the black rubber gasket into the shower head.
3. Screw the shower adapter onto the shower head.
4. Insert the second black rubber gasket into the shower adapter (may already be inside)
5. Screw the shower adapter onto the shower arm.
